OFFER EXPIRES 8/27/2010

## Have you heard about **MOTOTRBO**?

Allcomm is pleased to announce the installation of our new Mototrbo system in Birmingham. We chose the Mototrbo platform because it offers capabilities that other digital two-way radio systems can't provide. Some of the advantages of Trbo are clearer voice communications, static & noise rejection, enhanced battery life, easy migration to 12.5 kHz & expanded digital voice, data & control capabilities. One prime example of these benefits is the ability to run voice and data paths simultaneously. All Trbo portable and mobile radios have GPS capability and can be configured to transmit geographical coordinates at pre-programmed intervals. In addition, Trbo radios have the ability to be programmed in both analog & digital mode allowing for the migration of your communications to 12.5 kHz efficiency with minimal downtime. Below is a coverage map representing the service area on the current system. If you are interested in a demo of this site, please contact our Birmingham office at (205) 591-8804. Outside the parameters of the Birmingham system, Allcomm has both the frequencies and equipment to expand our coverage to other service areas based on our customer needs. If you are interested in a different service area, please contact us via email at [billy@allcomm.com](mailto:billy@allcomm.com) or [mary@allcomm.com](mailto:mary@allcomm.com) for more information. Also, customers have the option of purchasing their own Trbo system. There are several Trbo repeaters available that offer both single-site communications or multi-site connectivity. Allcomm is available to assist you in planning, installing and implementing your own system. For more information about Trbo products, the Birmingham system, or to schedule a meeting to discuss your communication needs, please contact your local office.

Call today for a demo on our Mototrbo System! Now through July 31st, we are offering a free month's service on our Birmingham system when you sign a one-year contract!

### Birmingham Mototrbo System User Charges

- ◆ \$100 Flat Rate Hook-up Fee
- ◆ \$20.00 Per Unit Per Month for one voice path
- ◆ \$25.00 Per Unit Per Month for one voice & one data path
- ◆ For pricing on additional paths or to inquire about system availability in other areas, please email [billy@allcomm.com](mailto:billy@allcomm.com) or [mary@allcomm.com](mailto:mary@allcomm.com).
