

January 2012

Allcomm Communicator

The Time is Here

The FCC has mandated that all land mobile Part 90, 25kHz efficiency systems operating on VHF (150-174 MHz) and UHF (421-512MHz) frequency bands convert to minimum narrowband 12.5 kHz efficiency by January 1, 2013. This mandate was handed down by the FCC in order to decrease congestion by expanding existing systems and promoting more efficient use of the VHF & UHF land mobile frequency bands.

Newer Motorola radios are already capable of operating under the new guidelines. This can be accomplished primarily through software. Licensees with dual mode (25/12.5kHz) radios are considered FCC compliant as long as the 25 kHz mode has been disabled via software. Older radios may need to be replaced or upgraded through firmware or hardware. After January 1, 2013, all users who have not migrated to 12.5 kHz will be considered in violation and are subject to FCC enforcement actions which include loss of license, monetary fines & admonishment.

Allcomm provides a variety of services and products to assist our customers in their efforts to comply with these guidelines. We can assist in license modification, inventory assessment, and implementation of your plan. Contact your local service department today with any questions or concerns.
